

Hamidu Mwaja ,6 years old. He has been studying in P 1 class at Nganwa Junior School Sheema District. His Mother is Afua Narwanga . His father is Mwaja Yusufu, Contact 0776223417.

His mother says all her children including Hamidu Mwaja have never been immunized.

On 15 th March 2014, Mwaja developed high temperature fever and went for medication at the nearest clinic, he was given three injections but after two days when he had finished injections, he started limping. I advised them (Parents) to him at Mbarara referral Hospital for examination to check whether it was polio or consequence of injections. Her mother says that the blood sample has been taken for examination for polio test but no results have been given to her. He was given a straightener, I highly except you're in put if possible visit the boys home in campaign week. I will send another scenario

Muramye Denson

Sheema immunization champion

Hamidu limping

On treatment for polio
